Dentsply Sirona X-ray Solutions:

Patient care empowered
by collaboration

Learn more >

Engineered to help you meet your goals

DS X-ray Solutions consist of a suite of products that deliver high-precision 2D and 3D X-rays of the patient’s oral and maxillofacial area.

Plus, you can benefit from our cloud storage and case-file-sharing solution with **DS Core™**, which is connected to the DS X-ray software, Sidexis® 4.

What are your goals? Whether you’re opening a new practice or want to offer more specialized treatments, DS X-ray Solutions are designed purposefully to help you meet them:

- Make informed diagnoses and optimize your treatment plans.
- Collaborate efficiently with specialists and partners.
- Treat more cases and grow your practice.

Intraoral Holder Systems

Capturing an excellent intraoral X-ray starts with proper sensor positioning

Our Intraoral Holder Systems help ensure a comfortable experience for your patient and support your dental assistant or hygienist in capturing a precise intraoral X-ray safely and efficiently.

With the various holder systems that we offer, from single-use to autoclavable, you get excellent support for accurate image capture. Choose the sensor holder system that fits your personal preferences, enhancing efficient image capture.

Extraoral X-rays

Preselected field of view sizes allow you to capture a range of views, including the complete dentition, to support a specific diagnostic need.

Metal Artifacts Reduction Software (MARS) automatically reduces noise and scatter caused by metal artifacts, delivering a diagnostically viable X-ray even in challenging environments.

HD mode highlights small details with a high resolution that goes up to 80µm.

Patient positioning features help you obtain a reproducible and comfortable scanning position for the patient, helping to minimize the risk of retakes.

Autofocus automatically provides you with a PAN image with the best possible sharpness out of several thousand images.

The Quickshot function for 2D X-rays reduces exposure time, dose and captures images effectively with patients that find it difficult to remain still, such as pediatric patients.

The Axeos Direct Conversion Sensor converts X-rays directly into an electrical signal for an improved yield of image information.

Field of View

Capture a precise area with volume sizes ranging from Ø5x5.5cm for a single tooth up to Ø17x13cm for capturing the entire maxillofacial area, including the TMJ.

For local findings, e.g. for endodontic issues or single implants.

Captures the lower and upper jaw, e.g. for planning multiple implants.

Shows the complete dentition for implant planning, 3rd molar extractions or sinus diagnostics.

Captures the complete dentition for TMJ diagnostics, orthodontic treatment planning, orthognathic surgery planning or upper airway segmentation considering TMJ position.

Make a confident diagnosis from the start

Our technology optimizes the quality of the final image, so you have the information you need right away.

- 2D

The Axeos Direct Conversion Sensor converts X-rays directly into an electrical signal for an improved yield of image information.

Metal Artifacts Reduction Software (MARS)

Metal artifacts are often a challenge in 3D X-rays. MARS automatically reduces noise associated with metal artifacts and can therefore help to facilitate a quality diagnosis.

The advantage: at Dentsply Sirona, MARS is a standard integration in all 3D X-ray devices, ensuring all 3D customers have the same high-quality images.

Make a confident diagnosis from the start

Our technology optimizes the quality of the final image, so you have the information you need right away.

The Axeos Direct Conversion Sensor converts X-rays directly into an electrical signal for an improved yield of image information.

HD Mode

In HD mode, hundreds of individual images are captured during a single rotation and converted into a 3D volume with up to 80µm resolution.

The advantage: low-noise X-rays with high image quality.

The HD mode is very useful in endodontics to visualize and measure all canals for accurate treatment planning. This can avoid the need for additional patient visits due to an overlooked canal.

Make a confident diagnosis from the start

Our technology optimizes the quality of the final image, so you have the information you need right away.

Positioning features

- The patented **Auto-Positioner** with occlusal bite block* establish the inclination of the patient's head to position it in the occlusal plane, together with the 3-point head fixation and firm handles, leading to a stable, reproducible and comfortable position.
- **The motorized, adjustable headrest** automatically stops at the right pressure around your patient's head and opens once the image capture is complete.
- **Assisted 3D positioning** thanks to Light lines for easy visibility of the volume.
- **Colored height adjustment buttons** intuitively guide the user in order to easily set the patient-specific device height.
- **The Smart Height Adjustment system** on Axeos will show you how to access the last settings used for each patient. This simplifies the preparation of the X-ray device before the patient arrives, saving time during set-up.

The advantage:
A low risk of needing retakes, thanks to reliable patient positioning.

Extraoral X-rays

Preselected field of view sizes allow you to capture a range of views, including the complete dentition, to support a specific diagnostic need.

Metal Artifacts Reduction Software (MARS) automatically reduces noise and scatter caused by metal artifacts, delivering a diagnostically viable X-ray even in challenging environments.

HD mode highlights small details with a high resolution that goes up to 80µm.

Patient positioning features help you obtain a reproducible and comfortable scanning position for the patient, helping to minimize the risk of retakes.

Autofocus automatically provides you with a PAN image with the best possible sharpness out of several thousand images.

The Quickshot function for 2D X-rays reduces exposure time, dose and captures images effectively with patients that find it difficult to remain still, such as pediatric patients.

The Axeos Direct Conversion Sensor converts X-rays directly into an electrical signal for an improved yield of image information.

Autofocus and Sharp Layer

An X-ray must be able to be diagnosed immediately. With the **autofocus function**, you will automatically receive an in-focus image with the best possible sharpness. Our Dentsply Sirona extraoral X-ray devices take several thousand individual images in one cycle and automatically recognize the areas in which the jaw is optimally positioned. A sharp panoramic image is created from the individual projections, without any manual intermediate steps from you.

This eliminates the need for preselecting jaw morphology, tooth anomalies and canine light, and thus simplifies the operation of the X-ray device.

Make a confident diagnosis from the start

Our technology optimizes the quality of the final image, so you have the information you need right away.

The Quickshot function for 2D X-rays reduces exposure time, dose and captures images effectively with patients that find it difficult to remain still, such as pediatric patients.

The Axeos Direct Conversion Sensor converts X-rays directly into an electrical signal for an improved yield of image information.

Quickshot function

Quickshot reduces the exposure time to a maximum of 9.1 seconds, thus reducing the dose and the risk of the patient moving during acquisition. This makes it a valuable feature for all practices, especially those working with a large number of pediatric patients or patients who struggle to stand still for a certain amount of time.

Make a confident diagnosis from the start

Our technology optimizes the quality of the final image, so you have the information you need right away.

2D

The Axeos Direct Conversion Sensor converts X-rays directly into an electrical signal for an improved yield of image information.

Axeos Direct Conversion Sensor

Conventional sensors have a scintillator that first converts X-rays into light, which is then converted into an electric charge. In contrast, the Axeos **Direct Conversion Sensor (DCS)** converts X-rays directly into an electrical signal.

The advantage: less signal loss and an improved yield of image information.

Optimize your treatment planning

Sidexis 4 is a central component of DS X-ray Solutions. It is a comprehensive software that provides you with a broad range of tools to detect, diagnose and discuss a treatment plan for optimal results. It also enhances patient consultation and treatment acceptance.

- <

Review 2D and 3D X-rays, intraoral scans and patient pictures into one place with **Lightbox**.
- <

Use **Compare mode** to analyze progression over time in the patient's mouth.
- <

Navigate from diagnosis to treatment with the **Timeline function**, which provides a chronological view of all the patient's scans.
- <

Access your personalized **intraoral series templates** in one click.

Click on the feature to learn more

Lightbox

Within the Sidexis 4 Lightbox, the ability to view different types of images (intraoral scan with 3D for an esthetic and bone combination approach) in the same workspace facilitates a comprehensive approach to treatment planning.

You don't have to switch between multiple programs, saving you time.

These cross-comparisons also provide you with increased confidence in your diagnosis and treatment plan.

Summary

Technical Properties

DS Core: Collaborate with ease and efficiency

DS Core is a platform where you can easily store and share your patient files, including 2D and 3D X-rays, intraoral scans, design files and any other relevant case files.

- **Save time when sending files:**

Send patient records, such as 2D and 3D X-rays, with the click of a button. Partners can view X-rays and intraoral scans, comment on patient files, download files, and send additional files back without a paid DS Core account.

- **Safe and inexpensive file transfer:**

No more USBs or DVDs sent through the mail or delivered with a carrier service. Now you can make use of a dental file sharing platform that supports HIPAA/GDPR compliance.

- **View files from anywhere:**

Access patient files through a web browser anywhere and at any time. An embedded 2D and 3D X-ray and intraoral scans viewer allows you and your partners to look at files directly on DS Core.

Empower your growth with Sidexis 4 and DS Core

Leverage the file storage capabilities of DS Core by consolidating all your Sidexis 4 files into one central location, saving you time and effort so you can focus on what matters most: treating your patients.

Complete Patient Record

Patient X-rays and intraoral scans from Sidexis 4, CEREC, and Connect software are automatically uploaded and stored in one location to enable efficient workflows in your practice. Integrated cloud storage means your patients' files are always available, wherever you are and whenever you need them.

Safe Patient Treatment Collaboration

DS Core supports GDPR/HIPAA compliant file-sharing all from one platform, you can seamlessly and securely collaborate with colleagues and external partners on patient treatment plans. Say goodbye to text messengers, emails, USB sticks or CDs.

of storage space, giving you the room to grow your practice

Delegate with confidence

While you save time to focus on your practice, your team can save time on the set-up and the appointment.

- **Automatic positioning features** in addition to the Autofocus technology can make it easy for you to delegate the preparation of the unit to your team and obtain a premium image with no manual steps.
- The chronological visualization of patient files in the **Sidexis 4 Timeline**, as well as other navigation features, can help your team quickly setup each appointment.
- For intraoral sensors, damaged cables can be **exchanged in-house**, avoiding the need for your team to organize and wait for repair, whilst limiting the cost.

- The patented **Auto-Positioner** with occlusal bite block* establish the inclination of the patient's head to position it in the occlusal plane, together with the 3-point head fixation and firm handles, leading to a stable, reproducible and comfortable position.
- **The motorized, adjustable headrest** automatically stops at the right pressure around your patient's head and opens once the image capture is complete.
- **Assisted 3D positioning** thanks to light lines for easy visibility of the volume.
- **Colored height adjustment buttons** intuitively guide the user in order to easily set the patient-specific device height.
- **The Smart Height Adjustment system** on Axeos will show you how to access the last settings used for each patient. This simplifies the preparation of the X-ray device before the patient arrives, saving time during set-up.

The advantage:
A low risk of needing retakes, thanks to reliable patient positioning

An X-ray must be able to be diagnosed immediately. With the **autofocus function**, you will automatically receive an in-focus image with the best possible sharpness. Our Dentsply Sirona extraoral X-ray devices take several thousand individual images in one cycle and automatically recognize the areas in which the jaw is optimally positioned. A sharp panoramic image is created from the individual projections, without any manual intermediate steps from you.

*EP1560520B1_2001_051_Aufbiss_Pan

Delegate with confidence

While you save time to focus on your practice, your team can save time on the set-up and the appointment.

- **Automatic positioning features** in addition to the Autofocus technology can make it easy for you to delegate the preparation of the unit to your team and obtain a premium image with no manual steps.
- The chronological visualization of patient files in the **Sidexis 4 Timeline**, as well as other navigation features, can help your team quickly setup each appointment.
- For intraoral sensors, damaged cables can be **exchanged in-house**, avoiding the need for your team to organize and wait for repair, whilst limiting the cost.

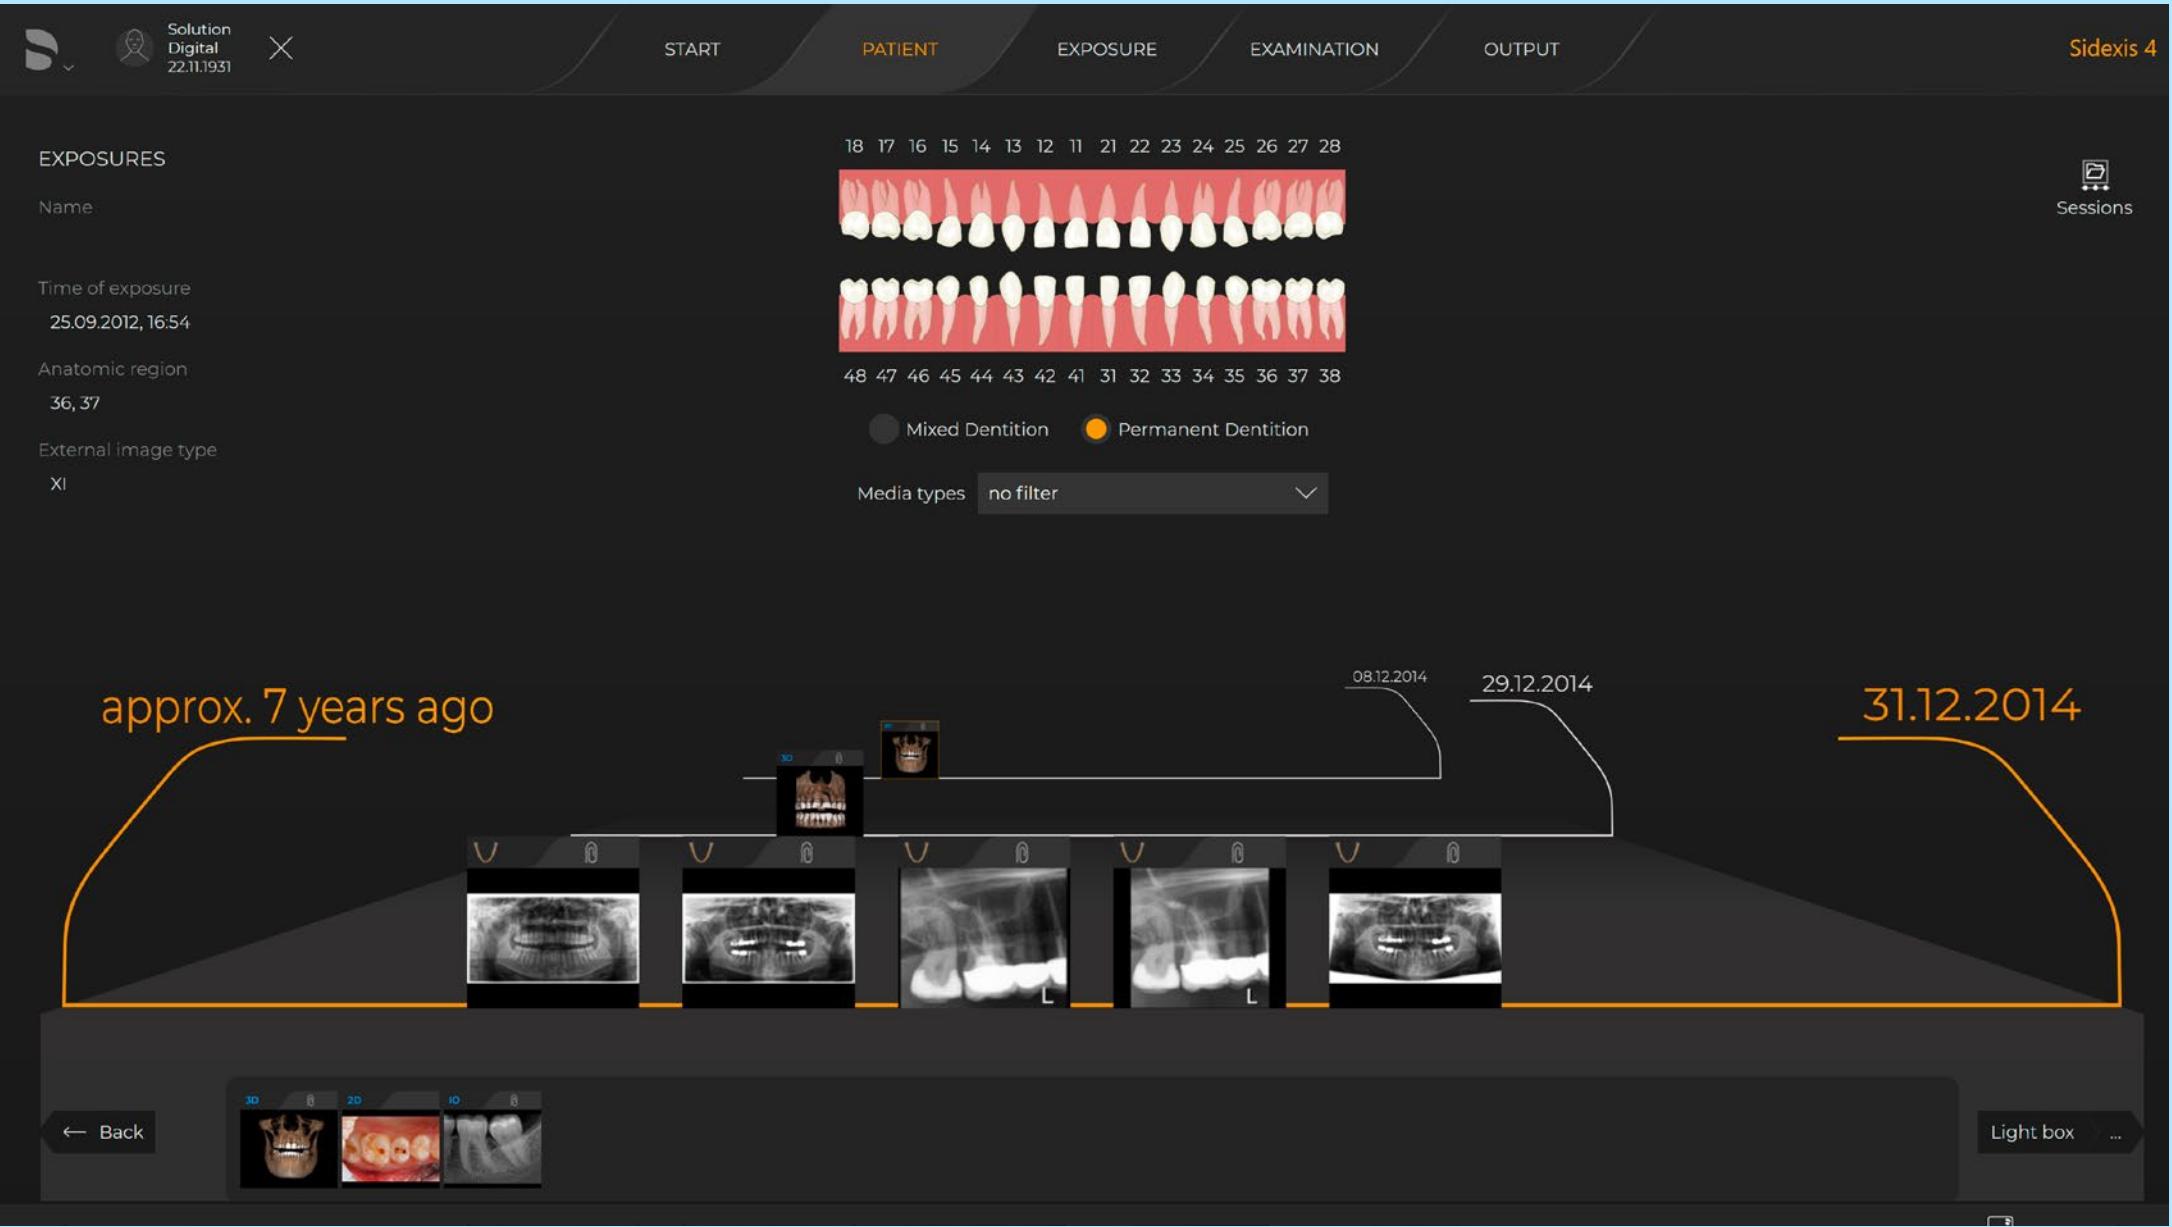

Click on each feature to learn more

Timeline function

Your team can easily navigate the patient's files in chronological order thanks to the Sidexis 4 Timeline, leading to a fast set-up of your workspace.

Your team can also filter by file type or tooth number, which helps display the data you need quickly.

Delegate with confidence

While you save time to focus on your practice, your team can save time on the set-up and the appointment.

Exchangeable cable for intraoral sensors

To avoid any down-time due to a broken cable, your team can easily change your sensor cable in the practice.

The ability to exchange the cable ensures no loss in productivity if unexpected damage occurs. For example, a chair may roll over the cable resulting in damage. In these cases, it is good to be prepared, and the exchangeable cable will ensure that you are fully supported and can continue working with minimal delay and minimal cost.

Encouraging treatment acceptance

DS X-ray Solutions help you communicate treatment plans to your patient, encouraging treatment acceptance.

With the Lightbox feature in Sidexis 4, you can conveniently arrange different image data such as 2D and 3D X-rays, intraoral scans or photographs for effective patient consultation.

With Sidexis 4, you can also leave your patients with a printed case overview.

Keeping your patients in-house

When you rely on DS X-ray Solutions, you can provide a wide range of treatments to keep your patients in-house.

• **Preselected fields of view** of Ø5x5.5cm–Ø17x13cm for Axeos and Ø5x5.5cm–Ø11x10cm for Orthophos S allow you to select the appropriate area of interest for accurate diagnostics and eliminate the need to refer the patient to a radiologist.

• **HD Mode for endodontics** highlights small details, so you can diagnose and treat effectively.

• **Intelligent Low Dose** creates 3D images at a 2D dose range, allowing you to obtain valuable data, even on your most X-ray-sensitive patients, such as children.

• Sidexis 4 connects with **Simplant Planning Services** to efficiently outsource your implant planning and surgical guide, so you can focus on the implant placement.

• Sicat Implant 2.0 in combination with CEREC and Sidexis 4 provides you with a **simple crown-down implant workflow**, helping you access more workflows in-house without the need to send your patient to a specialist.

Click on the feature to learn more

Field of View

Capture a precise area with volume sizes ranging from Ø5x5.5cm for a single tooth up to Ø17x13cm for capturing the entire maxillofacial area, including the TMJ.

For local findings, e.g. for endodontic issues or single implants.

Captures the lower and upper jaw, e.g. for planning multiple implants.

Shows the complete dentition for implant planning, 3rd molar extractions or sinus diagnostics.

Captures the complete dentition for TMJ diagnostics, orthodontic treatment planning, orthognathic surgery planning or upper airway segmentation considering TMJ position.

HD Mode

In HD mode, hundreds of individual images are captured during a single rotation and converted into a 3D volume with up to 80µm resolution.

The advantage: low-noise X-rays with high image quality.

The HD mode is very useful in endodontics to visualize and measure all canals for accurate treatment planning. This can avoid the need for additional patient visits due to an overlooked canal.

Intelligent Low Dose

The Dentsply Sirona Intelligent Low Dose offers high image quality at a low radiation dose for a wide range of indications like implant validation or tooth position.

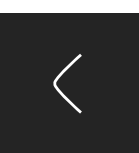

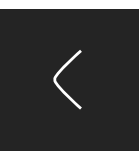

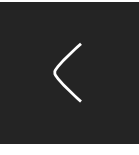

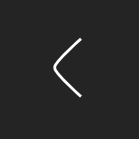

- Indication based**
The 3D Low Dose is suitable for a variety of clinical situations: implant osseointegration control in 3D in the dose range of a 2D X-ray, or orthodontic treatment planning, or tooth position evaluation, especially for young, radiation-sensitive patients.
- Dedicated copper filter**
In contrast to conventional low dose approaches, the Dentsply Sirona Intelligent Low Dose not only lowers the mA but also applies a dedicated copper filter. This enables good visibility of dense structures such as bone, despite the low dose.
- Intuitive**
With Dentsply Sirona X-ray Solutions, you can be sure to obtain 3D information in the dose range of a 2D X-ray with just a single click.

Implant Planning Services

With Implant Planning Services you can collaborate with implantology experts to accurately plan your implant treatment so you can confidently place implants with a patient-specific surgical guide – designed by us, approved by you. This comprehensive solution aids you throughout the process and supports you in achieving successful results.

Empowering you with the tools needed to easily plan and safely execute a surgery, Implant Planning Services offers a smooth entry into the world of implant treatment and helps you take on more complex cases. As an integral part of Dentsply Sirona’s digital implant workflow, you can rely on an experienced partner to build your dental business.

Receive behind-the-scenes support, while staying in control of your implant planning cases.

Sicat Implant 2.0

Modern and intuitive implantology

Whether you are just getting started or are already an experienced implantologist, Sicat Implant 2.0 effectively guides you through the implantology workflow with ease and efficiency.

Featuring seamless integration between diagnosis and planning, you get a truly unique user experience and an effective partner for your implant workflow.

Sicat Implant 2.0 supports precision and accuracy during the implant planning process. This helps the clinician to foresee any unfavorable complications prior to treatment, and helps to promote clinical confidence during surgery. In combination with the numerous surgical guide options, which can be ordered directly in the software, sent out to a local lab, or milled directly in-house with your CEREC milling unit, you are supported until the final placement of the implant.

[Products](#)[Diagnosis & Planning](#)[Collaboration](#)[Practice Growth](#)[Summary](#)[Technical Properties](#)

DS X-ray Solutions: patient care empowered by collaboration

Treat more patients in-house to empower the growth of your practice while benefiting from improved diagnostics and treatment planning. DS X-ray Solutions, powered by DS Core, can help you make it possible.

Optimize your diagnostics:

Obtain high-quality images to make a more informed diagnosis, using expertly engineered features such as the Metal Artifacts Reduction Software, a standard in all our CBCTs. Take a comprehensive approach to case assessment using Sidexis 4 and its ability to view patient files in multiple presentations.

Collaborate seamlessly:

DS X-ray Solutions, powered by DS Core, make collaboration on patient cases easy and efficient. Send X-ray files and patient records to your partners with the click of a button, all while supporting GDPR/HIPAA regulations.

Grow your practice with confidence:

Easy to use and versatile in its offering, DS X-ray Solutions allow to you to delegate responsibilities and treat more cases in-house. Use Sidexis 4 for clear visualizations to help encourage more treatment acceptance from your patients while maintaining one comprehensive patient media library through synchronizations with DS Core.

PC Requirements

To meet the different requirements depending on the size of the practice or clinic, the recommended hardware requirements for the server PC are differentiated according to the number of workstations. This allows a better working speed (performance) to be achieved depending on the size of the practice. The hardware requirements for the workstations are independent of the size of the practice.

Server PC

	Minimum requirements	Recommended for up to 20 workstations	Recommended for up to 50 workstations	Recommended for more than 50 workstations
Operating system	Windows 10 Pro (64-bit) ^{1,2} Windows 10 Enterprise (64-bit) ^{1,2} Windows 11 Pro (64-bit) ^{1,3} Windows 11 Enterprise (64-bit) ^{1,3} Windows Server 2016 ⁴ Windows Server 2019 ⁴ Windows Server 2022 ⁴	Windows Server 2016 ⁴ Windows Server 2019 ⁴ Windows Server 2022 ⁴	Windows Server 2016 ⁴ Windows Server 2019 ⁴ Windows Server 2022 ⁴	Windows Server 2016 ⁴ Windows Server 2019 ⁴ Windows Server 2022 ⁴
MS SQL server	MS SQL Server 2017 Express (included in the Sidexis 4 setup)	MS SQL Server 2017 Express (included in the Sidexis 4 setup) or higher version	MS SQL Server 2017, 2019 or 2022 (not included in the scope of delivery)	MS SQL Server 2017, 2019 or 2022 (not included in the scope of delivery)
CPU	2GHz/2-core processor	2.3GHz/4-core processor	2.3GHz/4-core processor	2.4GHz/12-core processor (e.g. XEON E5- 2673v3)
RAM	4GB	8GB	16GB	32GB
Hard disk	>1TB	>1TB	>1TB free space	>1TB
	Sufficient disk space must be ensured even during operation			
Graphics card	Any	Any	Any	Any
Network	1 Gbps Ethernet with DNS	1 Gbps Ethernet with DNS	1 Gbps Ethernet with DNS	5-10 Gbps Ethernet with DNS

1. Using these systems for server operation is not recommended, as they are not designed by Microsoft for this purpose. Slower performance compared to a server operating system is to be expected.
2. Tested with: Version 21H2
3. Tested with: Version 21H2
4. With desktop display, Windows Server Core is not supported.

Workstation PC

	Minimum for 2D stations	Minimum for 3D stations
Operating system ¹	Windows 10 Pro (64-bit) ^{5,6} ; Windows 10 Enterprise (64-bit) ^{5,6} ; Windows 11 Pro (64-bit) ⁷ ; Windows 11 Enterprise (64-bit) ⁷	
CPU	2GHz/2-core processor	2.3GHz/4-core processor
RAM	4GB	8GB
Graphics card	512MB, DirectX 9.0c compatible or Intel onboard graphics ⁸	2GB, DirectX 10 compatible or Intel onboard graphics ⁸
Hard disk	At least 5 GB of free space	
Network	1 Gbps Ethernet with DNS	
Screen resolution	At least 1280×1024 pixels, recommended: 1920×1080 pixels	
Optical drive	DVD ROM; DVD RAM (for use with wrap & go)	

5. For 64-bit operating systems, installation using Boot Camp (Apple IOS) is also approved.
6. Tested with: Version 21H2
7. Tested with: Version 21H2
8. To ensure that the interaction with the 3D rendered volume is reliably "judder-free", graphics cards are recommended with at least the following Passmark GPU benchmark values:
NVIDIA: Passmark >1000
AMD: Passmark >1500
Intel Onboard: Passmark >540
- The Passmark values can be found at www.videocardbenchmark.net if the name of the graphics card is known.
